Build your AI workforce around the way your business works

Start with the roles you need. Ampity creates, onboards and manages AI employees that own real responsibilities, learn your processes and take on more as they prove reliable. Ampity maintains the software, integrations, business knowledge and controls behind them.

MANAGED THE WAY YOU MANAGE PEOPLE

01 Define the role
Job description, responsibilities and KRAs

02 Teach the work
Your processes and examples of good work

03 Give approved access
Only the systems the role needs

04 Observe and correct
Supervised onboarding with reviewed corrections

05 Expand responsibility
More automatic work as reliability is shown

WHAT AN AI EMPLOYEE DOES

- Handles varied assignments across its responsibilities
- Works with your people and other AI employees
- Spots deadlines and blockers, and asks specific questions
- Updates your approved systems and checks the work is complete

DELEGATED AUTHORITY

Does automatically
Agreed duties inside its charter, such as record updates, reminders and weekly briefs

Brings to you
Specified decisions outside its authority, sent to a named person with context

Never does
Actions you rule out, such as changing contract terms or deleting records

AMPITY RUNS THE WHOLE SERVICE

Design
Role charters, KRAs, authority, cost model

Build
Connectors, checks and console

Onboard
Teach processes; supervised period

Operate
Monitoring, recovery, upkeep

Improve
Evaluations and KRA reviews

CONTROLLED OPERATING COST

- Repeatable steps run as software, not model calls
- Your own subscriptions can cover supported work
- API or extra usage scoped and budgeted upfront
- Measured as total operating cost per accepted result

YOUR CONTROL

- AI provider and tool accounts in your name
- No pooled subscriptions or shared logins
- Least-privilege access for each role
- Actions, decisions and checks recorded for review

Next step: a role design session for one to three roles.
Commercial terms follow in a written, scoped proposal.

Examples are illustrative. Components and integrations are configured and tested per engagement. Costs are modeled against your volumes, current provider plans and the agreed scope. Ampity is an AWS Advanced Tier Services Partner, a Google Cloud Partner, an OpenAI Select Partner and a Claude Delivery Partner. These company statuses are not certifications of the AI Workforce service.
